

VOLCANOS

By Emily

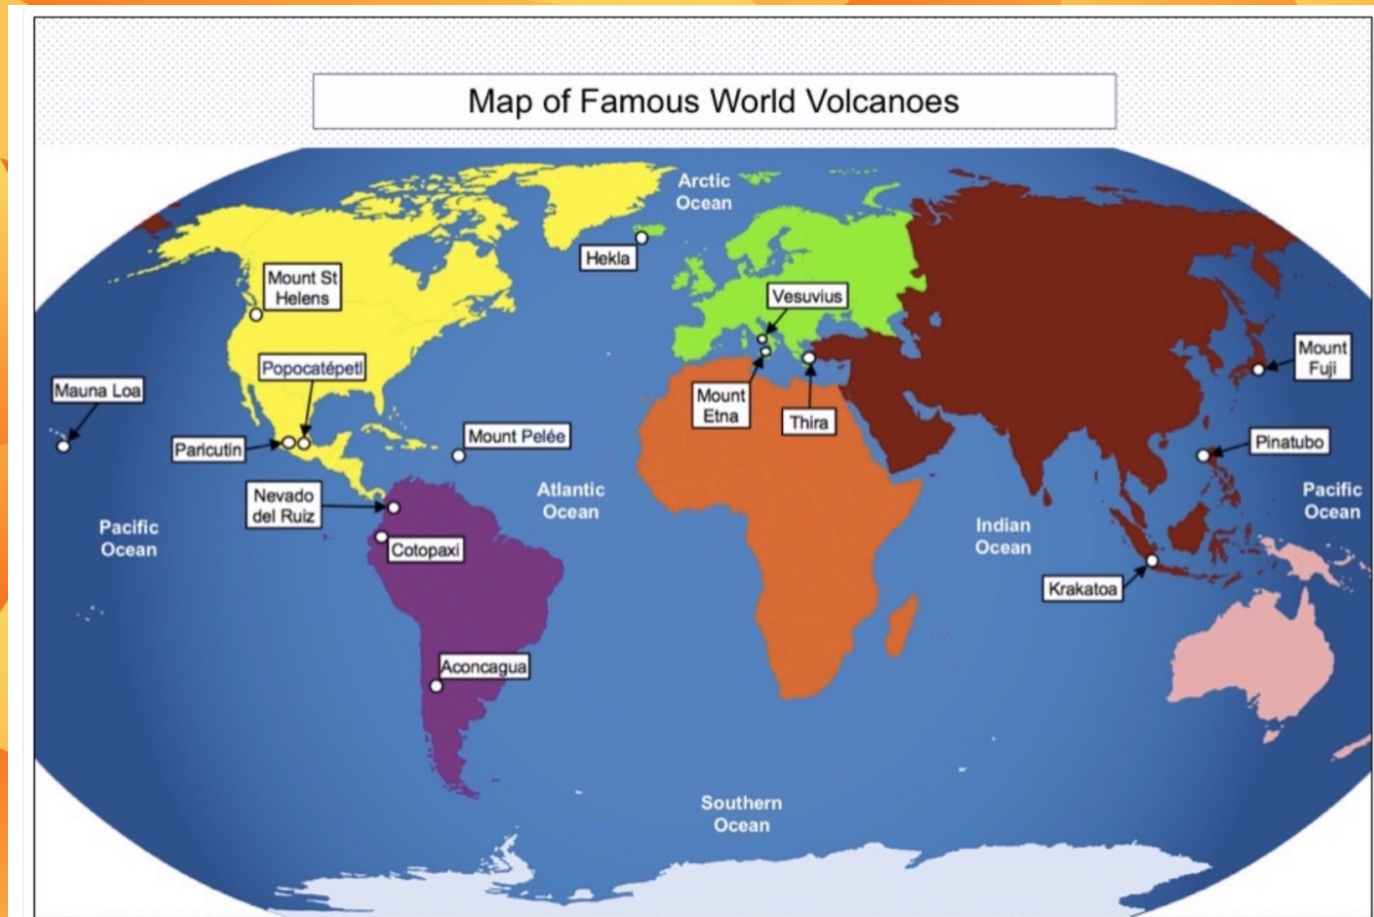

INTRODUCTION

Welcome to
my book all
about
volcanoes

WHERE ARE VOLCANOES FOUND?

They are around 1,350 active volcanoes worldwide, with some even under the ocean. Most are found around the ring of fire where tectonic plates meet.

VISIT A VOLCANO

You can see some volcanos around the world from space using google Earth. Watch video here

Mauna Loa

FAMOUS VOLCANOES

Here you can watch some video factfiles about famous volcanoes around the world

HEIGHT:

3776m

HEIGHT: 3350M

HEIGHT:

2549m

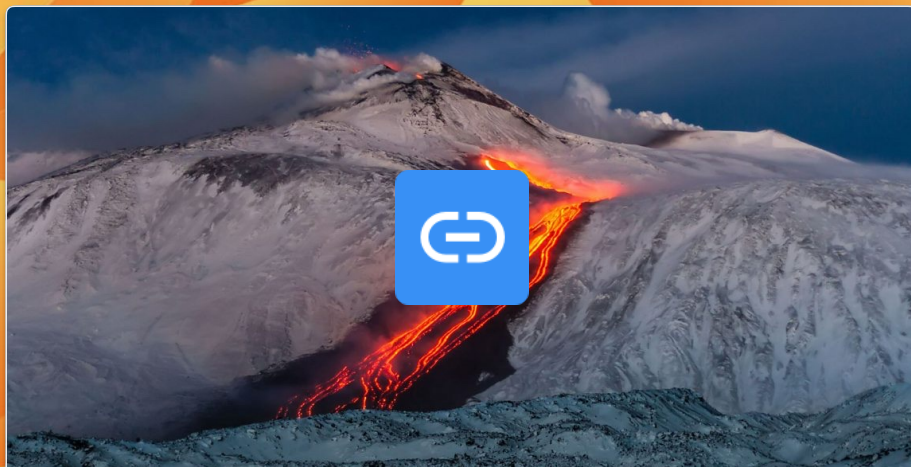

FAMOUS ERUPTIONS

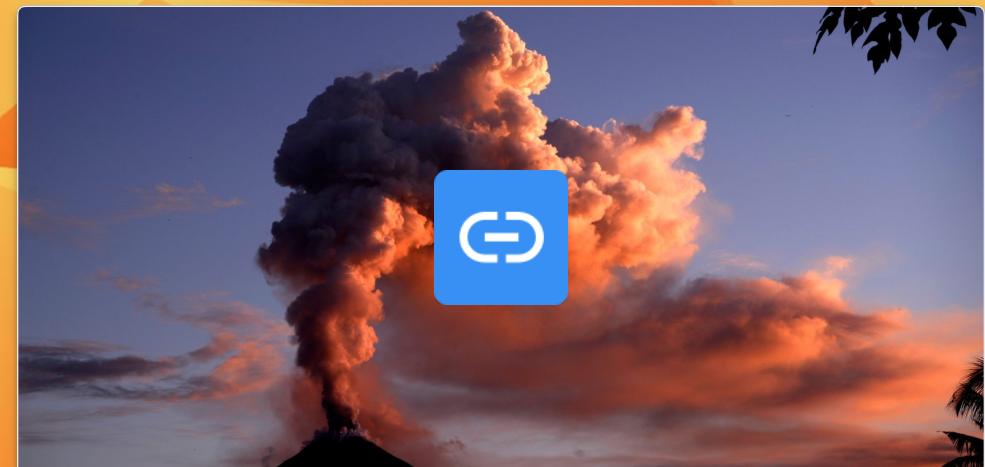

Of the many eruptions around the world, one of the most well known as the eruption in 79A.D. of Mount Vesuvius which buried Pompeii. Thankfully RAMJS isn't built on points of tectonic plates, but if it were, we might have these popping up outside.
